PROCESS SERVICES

Improving durability at an industrial site

FEED MANUFACTURING PLANT EXECUTIVE

- You want to control the durability according to the expectations of the breeders or customers

YOUR AIM

- Retain and satisfy breeders/customers by offering products adapted to the animal and the feed distribution systems

OUR METHOD

- Prior exchanges to qualify the service including the identification of the context (new equipment, type of food, etc.) and verification of the measurement conditions
- Collection of information on product, line and pelleting parameters, comparison to industrial practices
- On-site travel: expertise and measurements

THE RESULTS

- A full report with industrial recommendations and suggested corrective actions

THE ADVICE

IN ADDITION, TAKE THE QUALITY TRAINING CALLED «MANAGING PELLET QUALITY » TO OPTIMIZE THE PHYSICAL PRESENTATION OF YOUR PELLETS, AND IDENTIFY FACTORS INFLUENCING THE QUALITY OF THE PELLETS»

A USEFUL
DIAGNOSIS FOR
CUSTOMER
EXPECTATIONS

«The quality of the pellets and the control of the expected durability is a multifactorial subject. This service identifies the causes of degradation of durability and corrects practices if necessary.»

- Personalized approach tailored to your goal

AT YOUR DISPOSAL

«During my factory visits on this issue, I often find that durability is only perceived under a part of its perimeter. This restriction of the occult field is the real cause of the problem.»
