QUALITY SERVICES

Mixing behaviour of an active product

PRODUCT DEVELOPERS / MARKETING

- You want to compare the behavior to the mixture of different active products in food
- Validate homogeneous dispersion of your products into targeted feeds for regulatory record

YOUR AIM

- **Select the manufacturer supplier of the active product most stable in distribution**
- Demonstrate to the authorities or your customers the **correct homogeneity of your active ingredients** in feed

OUR METHOD

- **Homogeneity test by mixing** according to professional rules
- **Use of a reference tracer** to validate mixing performance or repeatability of the test
- **Physical analysis of the matrix used** and possibly the active products tested

THE RESULTS

- Writing a **test report**
- **Comparison** of some results with available databases (for direct clearers only)
- Respect for confidentiality
- **Review results with client**

THE ADVICE

OPT FOR **QUALITY TRAINING “HOMOGENEITY AND MIX: MANAGING KEY FACTORS”** TO ANTICIPATE CHANGES IN YOUR PRODUCTS

- **Controlling the homogeneity of the dispersion of your products promotes their efficiency and ultimately the satisfaction of your customers**

AT YOUR DISPOSAL

«When a client hesitates between several excipients, it is necessary to compare the behaviour of each one to the mixture, by obtaining representative samples. The **efficacy of the active substance** also lies in the stability of the mixture.»

Valérie QUÉMÉNEUR, Multipurpose technician.

A REAL +
FOR YOUR
REGULATORY FILES

«The value of the excipient is also measured through its stability of the mixture!»
