QUALITY SERVICES

Assessment of carry-over in a factory

PLANT OPERATOR / REFERENCE FEED MANUFACTURING QUALITY

- You want to anticipate a regulatory or quality audit by making a diagnosis of your manufacturing line
- You have modified or performed maintenance of your equipment, changed formula, or raw material and you need safe industrial procedures to secure your productions

YOUR AIM

- Achieve a level in line with good manufacturing practices (RCNA, GMP+, etc.)
- Check the impact of an industrial practice on carry-over

OUR METHOD

- Selection of a suitable tracer and methodology
- Strict compliance with professional rules
- Sending a ready-to-use kit

THE RESULTS

- Sample processing and analysis
- Physical analysis of feed
- Comparison of results with factory history
- Interpretation of results with client
- Development of industrial recommendations
